

A Life Member's Perspective

Mr. Chandrasekar's - Complete Review of the Cybersecurity Panel Discussion

As it is said "Better Late than Never" Here is my comments on the program held on 16th March 2025 "Cybersecurity more essential for Humans or Information". Beautiful subject and thought provoking. Firstly, my compliments to the core team in organising the event in such a large auditorium. When I entered, I thought it is quite a big space and will there be so many participants for this program. I am thrown to surprise the auditorium was packed. Great efforts by everyone and of course credit to participants for being patiently attending the full session. The program started with தமிழ் தாய் வாழ்த்து.

President as usual set the context very well for the rest of the panel members to take it forward, lot of information and data was shared to what extent the cyber-attacks and financial losses that were happening through Cyber Crime. The information CIA , Data Privacy , Accessibility, AI, Social engineering Attacks through AI and the accuracy of the attack were spoken in length.

Secretary has his own way to deliver the content which was beautifully put across starting from the Evolution of a communication through sign language to computers outsourcing these days for communication. Content delivery is always attached to a beautiful song of yester years which is APT for today's era combined with his past real time experience which makes his speech more vibrant and keeping the audience alive in the session.

Justice Mr Anand Venkatesh simply in a jovial way took good control of audience while opening his session, he explained how human and information are interlinked. He also explained well about the human evolution its cause and effects during the continuous journey of evolution. Importantly he explained the physical world and Cyber world are different, he also quoted some of good example while using the cyber space how you are carried away to different place and not in the real world assuming that you are in a familiar zone. He stretched very well on the fundamentals and basics about human evolution, how the 5 senses work in an interconnected manner. Well explained about the how one may behave in real world and how the same persona may behave in the cyber world unknowingly the difference in the real and cyber space. Some new information for me on "Time distortion effect" which may have an effect in committing a crime in cyber world. He also explained how the crimes were there for many years ago and how it is getting exposed now.

Mr Naavi spoke well about the hypnotics that is involved in the cybercrime and metaverse which was very interesting.

Ms Nappinai well explained about various types of crime and related laws around the world and how our laws are getting aligned. She also explained how the victim misses to understand there are so many persons beyond the screen.

Mr Vaitheeswaran well explained about personal and digital hygiene and the use of the various social medias and how vulnerable if we are not setting the access permission. He also insisted to spend quite few time with the people at home especially elderly person and understand what they convey. He also mentioned about how we get trapped by picking up unnecessary calls and opening links.

Mr Sarath explain about various laws and relevant Laws and he quoted various case studies which would help budding lawyers.

Quite few smart questions at the end of session. The moderators handled the over all session very nicely keep all participants live and intact till the end of session. Session completed with National Anthem Overall, the half day was worth a time spent and carried lots of information while leaving the hall from great personalities.

Thank you!
